

Ben Younes Sadok Aziz

AI/LLM Engineer — Agentic AI Systems and MLOps

☎ (+216) 92 558 515 ✉ sadokaziz.benyounes@ensi-uma.tn [in](#) [benyounes-sadokaziz](#) [benyounes-sadokaziz](#)

Education

National School of Computer Science (ENSI), Manouba, Tunisia

Sept 2023 – Sept 2026

Engineering Degree in Computer Science

Preparatory Scientific Cycle: Mathematics – Physics

Sept 2021 – Jun 2023

Higher School of Science and Technology of Hammam Sousse (ESSTHS)

Skills

Programming: Java, Python, JavaScript, TypeScript

Databases: PostgreSQL, MySQL, DynamoDB, SQLite

Frameworks: Angular, Spring Boot, FastAPI, WebSocket

Machine Learning & CV: PyTorch, YOLO, OpenCV, ByteTrack, TensorFlow, Scikit-learn, LightGBM, NLTK, OCR (Tesseract/EasyOCR), Pandas, BERT, Transformers, Unsloth, NumPy

LLMs & GenAI: Mistral, DeepSeek, LangChain, LangGraph, FastMCP, RAG, Multi-Agent Orchestration

MLOps: Docker, GitHub Actions, Prometheus, Grafana, CI/CD, ZenML, MLflow, DVC, pytest

Tools: Git, GitHub, VSCode, Google Colab, AWS, Redis, Google Gen AI Toolbox, CUDA, bitsandbytes

Languages: English (Advanced), French (Advanced), Arabic (Native)

Experience

Applied AI & MLOps Engineering Internship – Ora Studio

Apr 2026 – Aug 2026

- Built Voice Vibe, a real-time multi-agent voice assistant plugin orchestrating six specialized LangGraph agents over a WebSocket-based STT/TTS pipeline, benchmarking end-to-end latency against 5 production voice AI platforms.
- Designed an end-to-end MLOps pipeline (CRISP-DM) for a suggestion-acceptance recommender: leak-free feature engineering, calibrated LightGBM/Logistic Regression models tracked with MLflow and DVC, and a deterministic promotion gate with shadow → gate → promote deployment.
- Hardened the system with prompt-injection defenses, WebSocket rate-limiting, and a GitHub Actions CI/CD pipeline with automated testing and dependency auditing.
- **Technologies:** FastAPI, LangGraph, PostgreSQL, LightGBM, MLflow, DVC, Docker, GitHub Actions, pytest.

AI and LLM Engineering Internship – BA-Consulting

Jun 2025 – Aug 2025

- Built custom MCP servers (Calendar, Gmail) and deployed Gen AI Toolbox database tools on AWS Lambda for scalable, serverless operation.
- Built a QLoRA-based TinyLlama fine-tuning pipeline (4-bit quantization) orchestrated with ZenML/MLflow and Docker for GPU-accelerated training.
- **Technologies:** FastMCP, LangChain, Docker, AWS Lambda, DynamoDB, SQLite, Unsloth, ZenML, MLflow.

Full-Stack Software Development Engineering Internship – Core Techs Solutions

Jul 2024 – Aug 2024

- Optimized backend data structures with hash tables and built real-time dashboard components turning complex vehicle data into actionable insights.
- **Technologies:** Spring Boot, Angular, PostgreSQL.

Projects

Intelligent Traffic Monitoring System – Computer Vision

Jul 2025 – Oct 2025

- Built an end-to-end CV pipeline (YOLOv8 + ByteTrack) for real-time vehicle detection, tracking, speed estimation, and OCR-based license plate recognition, backed by a Redis/Celery queue for distributed video processing and a live Streamlit/WebSocket dashboard.
- **Technologies:** YOLOv8, ByteTrack, FastAPI, Docker, Prometheus, Grafana, MLflow, Streamlit, WebSocket

Sign Bridge – Computer Vision and NLP

Jan 2025 – May 2025

- Architected a multimodal (speech, text, video) translation system converting inputs into sign language via 3D Unity avatar animations, using OpenPose pose estimation and BERT-based NLP for accurate cross-modal understanding.
- **Technologies:** FastAPI, JavaScript, Unity, OpenPose, PostgreSQL, BERT, Transformers, NLTK, Pandas
